Collections in Java

A Collection is a group of individual objects represented as a single unit. Java provides Collection Framework which defines several classes and interfaces to represent a group of objects as a single unit.

The Collection interface ([java.util.Collection](#)) and Map interface ([java.util.Map](#)) are two main root interfaces of Java collection classes.

DataSource and DriverManager on J2SE

2

1

I'm interested in developing a desktop application that connects to a MySQL DB. After reading [this](#) java tutorial on DB connection (and several others) I have a question. Using DataSource seems popular on J2EE while DriverManager is a common choice for desktop applications. Is it still possible to use DataSource on a desktop application? If yes, is it a better choice over DriverManager?

I'll quote the javadoc:

2

An alternative to the DriverManager facility, a DataSource object is the preferred means of getting a connection.

Normally you use `DriverManager` when you just want a connection for one time while with `DataSource` you get other features such as connection pooling and distributed transactions.

Hope this helps.

insight sentence

a sentence from Stack

Overflow that is related to a particular API type and that provides insight not contained in the API documentation of that type

	A	B	C	D	E
1	sentence	answer_i	type	sentence	meaningful?
816	2817	234	DriverManager	Most applications these days use the DataSource interface and do not interact with the DriverManager like this.	y
817	32	3	AudioClip	Most media formats (sound, image, video etc.) are what is known as 'container formats'.	y
818	1654	123	String	Most random number generators are, in fact, "pseudo random".	y
819	891	83	Serializable	My guess would be the possibility to consistently extend the class.	y
820	1834	149	String	My opinion, and it's only that, is that as soon as you start using it, it's not a String.	y
821	3687	314	JPanel	My suggestion is to go through the Oracle Swing Tutorial and see what you can learn.	y
822	1866	155	String	NB: the compare is done on 'usuario' because that's guaranteed to be unique.	y
823	3733	319	JPanel	Neither cardsPanel1 nor cardsPanel2 (dark gray) have an explicit background color.	y
824	286	14	Image	Next I extend JLabel:	y
825	286	14	JPanel	Next I extend JLabel:	y
826	3408	287	ArrayList	No, ArrayList of ArrayLists cannot contain other elements.	y
827	3719	316	JPanel	None of these panels will be visible unless you add them to the container.	y
828	2707	224	DriverManager	Normally you do not need to implement it, use the class from the DriverManager.	y
829	2848	237	DriverManager	Normally you use DriverManager when you just want a connection.	y
830	1000	101	Serializable	Not just Serializable.	y
831	736	67	PropertyChange	Not likely 3, but 3.1.	y
832	275	13	Image	Not really a problem when loading from the application jar.	y
833	275	13	JPanel	Not really a problem when loading from the application jar.	y
834	1650	122	String	Not too shabby.	y
835	3360	279	ArrayList	Not with my solution!	y
836	969	95	Serializable	Note that all non-static non-transient fields of A and B must be serialized.	y
837	102	7	AudioClip	Note that Class.getResource doesn't take a full file name.	y
838	1842	151	String	Note that in Java SE 7 and later you can use a String object.	y
839	850	77	Serializable	Note that it still invokes defaultWriteObject for the "easy" fields.	y
840	1015	105	Serializable	Note that Serializable is just a marker interface.	y
841	1864	155	String	Note that string constants are usually "interned" such that identical strings share the same memory.	y
842	3125	247	ArrayList	Note that the returned type for asList() is a List using a collection.	y
843	1575	112	String	Note that the second parameter (i.e. Charsets).	y
844	466	39	Image	Note that you can find the background color component by using the getBackground() method.	y

Coding Guide for "Meaningful"

The following kinds of sentences are considered meaningful on their own:

- The sentence contains a reference to another sentence.
Example: *Like EJP said the key part is to save in a byte array.*
- The sentence contains a reference to a mutable list.
Example: *The block size is parameterized for run-time performance optimization.*
- The sentence contains a reference to "it", "this", "that", etc., which are not resolved by the context.
Example: *Because the java.io.*

coding guide

- The sentence contains a code snippet (often indicated by a colon).
Example: *create a factory method.*
- The sentence is grammatically incomplete.
Example: *Most random number generators are, in fact, pseudo random.*

- The sentence contains a reference to something that is not an obvious part of the API ("block" in the example).
Example: *The block size is parameterized for run-time performance optimization.*
- The sentence contains a comparison that is incomplete (i.e., one part of the comparison is missing).
Example: *char[] is less vulnerable.*

- The sentence references code elements that come from user examples rather than the API.
Example: *You might be surprised to find out that in your sample code, s1 == s2 returns true!*

- The sentence references specific Stack Overflow users.
Example: *Like EJP said the key part is to save in a byte array.*

- The sentence only contains a link.
Example: *http://www.jmagick.org/index.html.*

- The sentence contains a reference to something that is not an obvious part of the API ("block" in the example).
Example: *The block size is parameterized for run-time performance optimization.*

- The sentences starts with "but", "and", "or" etc.
Example: *And then another instance of string with content Hello world.*

- The sentence is a generic statement that is unrelated to the API type.
Example: *Most random number generators are, in fact, pseudo random.*

- The sentence contains a comparison that is incomplete (i.e., one part of the comparison is missing).
Example: *char[] is less vulnerable.*

- The sentence resulted from a parsing error.
Example: *Because the java.io.*

- The sentence requires another sentence to be complete.
Example: *First, you have to know the encoding of string that you want to convert.*

- The sentence contains an explicit reference to a piece of context that's missing.
Example: *What you're trying to do here is rather unusual, to say the least.*

Other sentences are considered meaningful.

Augmenting Java API Documentation with Sentences from Stack Overflow

* Required

java.io.InputStream

<http://docs.oracle.com/javase/7/docs/api/java/io/InputStream.html>

In the following, we are showing you sentences from Stack Overflow that are related to Java's InputStream. They were automatically extracted using different approaches which we are comparing in this study. Please indicate for each sentence whether it is meaningful and whether it adds useful information. The answer options are the same for each sentence.

The best practice is to put your entire code into a try{ ... }catch block and add a finally block where you should close the inputStream *

FileInputStream is an inputStream. *

- ☐ The sentence is meaningful and adds useful information not found in the API documentation.
- ☐ The sentence is meaningful, but does not add useful information to the API documentation.
- ☐ The sentence requires more context to understand.
- ☐ The sentence does not make sense to me.

```
public class MultipleOfThreeInAnArray {
    public static void choseMultiplesOfThree(int[] input) {
        int[] output = new int[input.length];
        int index = 0;
        for (int i = 0; i < input.length; i++) {
            if (input[i] % 3 == 0) {
                output[index++] = input[i];
            }
        }
        System.out.println(Arrays.toString(output));
    }
}
```

Insert elements from one array to another array in Java

▲ 1 I'm trying to identify multiples of 3 from an input array and insert those multiples in to output array. Using a count variable I can declare the output array. But then how can I insert multiples in to output array?.
